

The Best of The Best of The Best.....

There is no such thing as The Best. Sorry 'bout that. There's good, pretty good, really good, wow, that's exceptionally good and better than good. But The Best? I don't think so. And here's why:

If you owned the best of something then you would be foolish to replace it. Entire industries would collapse. The world economy would implode. The earth would stop spinning on it's axis, gravity would cease to exist. Cats and dogs and Republicans and Democrats and men and women would live together in peace and harmony. Complete anarchy!

This is why I'm not saying we have the best subwoofers, or the best Bass Augmentation Speaker Systems. Actually, we're the only ones offering Bass Augmentation Speaker Systems.

The goal today seems to be to get the most bass out of the smallest package possible. This is in essence ignoring the laws of acoustics. Most of the disadvantages of this approach can be addressed by massive amounts of brute force electronic manipulation. But not all of these issues can be solved this way. And I believe there are audible side effects of all that manipulation.

We are offering an Acoustically Optimized Alternative. By this I mean we are not using any electronic manipulation to achieve design goals. We are using the math dictated by the laws of acoustics to reach our goals. The result is a natural and organic sounding system that will blend in and augment the lowest notes that your speakers are unable to reach. We call it Power & Authority with Discipline & Control.

And we can do this without drawing attention to ourselves. During one of the trade shows we attended a visitor commented that the best subwoofer is the one you don't really hear. Couldn't agree more. Your speakers should be the star of the show. We're just helping them to sound more better.

See? Sound more best just doesn't sound right.

HAPPY LISTENING

John
